CONSTRUCTION OF OIL CONTAINMENT SYSTEMS AT TENTERFIELD SUBSTATION

Contract Value: \$1,045,100

Client: Transgrid

Gongues Constructions were engaged by Transgrid to carry out upgrade works to the oil containment systems at Tenterfield Substation.

The project consisted of the following works:

- Demolition of two existing transformer bunds, transformer rails and existing drainage pits and pipework
- Construction of two new transformer bunds
- Construction of new oil containment drainage including flame traps, pits, DICL and RCP pipework
- Construction of a new Primary Oil Containment tank
- Installation of a two-coat seal to the transformer roadway

Working in Tenterfield in the middle of winter proved challenging with record breaking snowfalls being received in 2015.

Gongues Constructions completed the oil containment works to Tenterfield Substation in mid 2015 and continue to foster a cooperative and healthy relationship with our valued client Transgrid.
