Nightcap Water Treatment Plant – Design and Construction of a Generator Facility

Contract Value: \$726,000

Final Value: \$752,000

Client: Rous Water (NSW Public Works)

Client Contact: Mark Stalhut

Rous Water identified a need to install standby power generation at the Nightcap Water Treatment Plant after several extreme weather events caused power to be lost at the site for a period of time.

Two new standby emergency generators were purchased by Rous Water prior to letting the contract for the design and construction a facility to house the generators.

The project brief was for the design and construction of a generator facility including:

- Generator storage bund
- Diesel refueling bund
- Stormwater management
- Emergency diesel spill containment

The design was completed by Snowy Mountains Engineering Company and construction was completed in September, 2016.
